[PROTOCOL :: SIFT]

Autonomous DFIR Orchestration & Analysis

{"status": "initializing", "module": "forensics", "target": "system_core"},

// INITIALIZING FORENSIC ENVIRONMENT...

NotebookLM

[SYS_PROMPT :: ~/.claude/CLAUDE.md]

- **Role:** Principal DFIR Orchestrator
- **Directive:** Autonomous Execution (zero manual mid-task prompting)
- **Constraint:** Strict read-only evidence handling

// STATUS: Evidence mapped. Read-only enforced.

[PERMISSIONS :: settings.json]

- **Vetted Execution:** Pre-approves Volatility, Plaso, Sleuth Kit, and EZ Tools
- **Denial Matrix:** Explicitly blocks destructive/exfiltration vectors

```
"permissions.deny": {
permissions.deny: ["rm -rf", "dd", "wget", "curl"]
  "permissions.deny": ["rm -rf", "dd", "wget", "curl"]
```

// BLOCK EXECUTED: Destructive logic intercepted via settings.json.

[CHAIN_OF_CUSTODY]

- Trigger: hooks.Stop
- Action: Auto-appends session actions to ./analysis/forensic_audit.log. Immutable audit trail maintained.

```

NotebookLM

[ARCHITECTURE :: ~/.claude/skills/]

Domain-specific prompt libraries (**SKILL.md**) loaded strictly on demand. Zero context window bloat.

Timeline Generation

Tools: Plaso suite (log2timeline.py, psort.py)

Filesystem Forensics

Tools: The Sleuth Kit (fls, icat, mmls), EWF raw disk navigation

Memory Forensics

Tools: Volatility 3, Memory Baseliner. Extracting rogue processes/injections

Windows Artifacts

Tools: EZ Tools native on Linux via .NET runtime (EvtxECmd, MFTECmd)

Threat Hunting

Tools: YARA.

```
> Loading yara-hunting/SKILL.md...
  Executing rapid IOC sweeps across files and memory images.
```
